Beyond Worst-Case Analysis in Combinatorial Optimization

analysis of algorithms (BWCA), considers the design and analysis of problems using more re-alistic models or using natural structural properties. The goals of BWCA are to design realistic models and new theoretical algorithms which perform well in practice, as well as to explain why preexisting algorithms that do well in practice perform better than worst-case analysis sug-gests. constraint-based MOCO algorithms. Our analysis reveals a deep connection between the search mechanism of a constraint solver and the exploration of the search space of a MOCO problem. 1 Introduction In a multi-objective combinatorial optimization (MOCO) problem, multiple objectives must be optimized simultaneously. MOCO problems arise in many areas where there are tradeoffs, such as
