[Deployable Structures: Concepts and Analysis](#) attempt to inject new ideas into the field of deployable structures. Three concepts for deployable structures are presented. Two of the concepts are new, a generic class of foldable cylinders, and a new solid surface deployable reflector. The third concept is an old idea for folding a membrane, which has been re-analysed and extended. Some analysis is done for each of these concepts to prove Deployable structure - Wikipedia

A deployable structure is a structure that can change shape so as to significantly change its size. [1] [2] Examples of deployable structures are umbrellas , some tensegrity structures, bistable structures , some Origami shapes and scissor-like structures.
