**Discrete Event Systems - IEEE SMC**

Discrete event system models (for instance Petri nets, automata, Markov chains) are used to describe very different aspects of the real world: computer systems, communication systems, manufacturing systems, traffic systems. Corporations and researchers are attracted by the key problem of using effectively and efficiently the latest developments of Information and Communication Technologies and

**Discrete Event Systems | IEEE Control Systems Society**

A discrete event system is a dynamic system with discrete states the transitions of which are triggered by events. This provides a general framework for many man-made systems where the system dynamics not only follow physical laws but also the man-made rules.
