Machine learning is the science of getting computers to act without being explicitly programmed. In the past decade, machine learning has given us self-driving cars, practical speech recognition, effective web search, and a vastly improved understanding of the human genome.

[Machine learning - Wikipedia](#)

Rule-based machine learning is a general term for any machine learning method that identifies, learns, or evolves "rules" to store, manipulate or apply knowledge. The defining characteristic of a rule-based machine learning algorithm is the identification and utilization of a set of relational rules that collectively represent the knowledge captured by the system. This is in contrast to other

In this guide, we're going to reveal how you can get a world-class machine learning education for free. You don't need a fancy Ph.D in math. You don't need to be the world's best programmer. And you certainly don't need to pay \$16,000 for an expensive "bootcamp."

### **Understanding Machine Learning: From Theory to Algorithms**

machine learning, and the algorithmic paradigms it offers, in a principled way. The book provides an extensive theoretical account of the fundamental ideas underlying machine learning and the mathematical derivations that transform these principles into practical algorithms. Following a presentation of the basics of the field, the book covers a wide array of central topics that have not been
