[Transition metal carbene complex - Wikipedia](#)

A transition metal carbene complex is an organometallic compound featuring a divalent organic ligand. The divalent organic ligand coordinated to the metal center is called a carbene. Carbene complexes for almost all transition metals have been reported. Many methods for synthesizing them and reactions utilizing them have been reported. The term carbene ligand is a formalism since

many are not derived from carbenes and almost none exhibit the reactivity characteristic of carbenes. Described often
