The population balance modeling is a statistical approach for achieving accurate counts of any populations. It is an efficient way of counting traffic on roadways as well as to bacteria in lakes. In the biomedical world, it is used to count cell populations for the creation of biomaterials. Despite their undisputed accuracy, they have been underutilized for design and control purposes due to Population Balances in Biomedical Engineering: Segregation ...

Population Balances in Biomedical Engineering: Segregation through the Distribution of Cell States by: Martin A. Hjorts Abstract: The process of separating and classifying individual cell populations is one of the most critical and difficult tasks faced by engineers and scientists when creating biomaterials.
