Rare gases | HQ

Rare gases Neon, krypton and xenon, the rare or noble gases, are only present in the air in trace amounts. Air contains just 0.0018% neon, 0.00011% krypton and 0.000009% xenon.

Noble gas - Wikipedia

The noble gases have also been referred to as inert gases, but this label is deprecated as many noble gas compounds are now known. Rare gases is another term that was used, [3] but this is also inaccurate because argon forms a fairly considerable part (0.94% by volume, 1.3% by mass) of the Earth's atmosphere due to decay of radioactive potassium-40.

Rare Gas Adsorption on Solids of the Lunar Regolith

MELVIN A. COOK IRECO Chemicals, Salt Lake City, Utah Received August 26, 1970; accepted October 26, 1970 This article analyzes the composition and concentration data on rare gases in the lunar solids taken in the Apollo 11 and 12 missions.

On the crystal structure problem for heavy rare-gas solids ...

The observed higher stability of a face-centered cubic (fcc) arrangement of atoms in heavy rare-gas solids, relative to that of a hexagonal close-packed (hcp) structure, is ascribed to the effect of three-atom short-range (exchange) interactions on the static lattice energy, evaluated in first- and second-order exchange perturbation theory.
