Static and Dynamic Properties of Liquids - Proceedings of ...

The idea of a workshop devoted to the static and dynamic properties of liquids arose from two smaller meetings on the same topic held at the Interfaculty Reactor Institute, Delft, The Netherlands in 1985 and 1987, and from the LAM-conference (International Conference on Liquid and Amorphous Metals)

What is dynamic and static? - Definition from WhatIs.com

In general, dynamic means energetic, capable of action and/or change, or forceful, while static means stationary or fixed. In computer terminology, dynamic usually means capable of action and/or change, while static means fixed. Both terms can be applied to a number of different types of things

We performed molecular dynamics (MD) simulations of ionic liquids composed of 1-butyl-3-methylimidazolium ([bmim]) cation with PF₆, NO₃ and Cl anions to determine their static and dynamic properties. Large-scale simulation of 4096 ion pairs (131,072 particles in [bmim]PF₆) was performed to estimate the system-size dependence of the static and

Static and dynamic properties of liquid Zn, Cd and Hg

...

In the present work, we report a study on several static and dynamic properties of bulk liquids Zn (l-Zn), l-Cd, and l-Hg, which are divalent metals located in group IIB of the periodic table. The liquids Zn and Cd have some anomalous surface properties characterized with a positive temperature coefficient of surface tension. Moreover, at thermodynamic states around their respective triple point, both l-Zn and l-Cd display the same type of anomalous liquid static structure factor.
