How to pass structure to a function in C programming?

How to pass structure to a function in C programming? In this article, you'll find relevant examples to pass structures as an argument to a function, and use them in your program. In C, structure can be passed to functions by two methods: Passing by value (passing actual value as argument) Passing by reference (passing address of an argument) Passing structure by value. A structure variable Structure Determines Function (Interactive tutorial ... Structure determines function is also a key idea in engineering. In this human realm, structure/function relationships are often more obvious and easier to grasp than they are in the biological realm. Let's use a hammer as an example:

They are a challenging class of molecules to study due to their diverse structures and functions. 1-3 Their distribution differs in various cell membranes depending on the cell's function. Thus elucidation of their structure could shed light on the role they play in the physiology and biochemistry of the membrane and on pathological aspects of brain related diseases. Cell membranes are
