What are the differences between uranium-235 and 238? - Quora

How fast is a neutron in uranium 235 or plutonium 239 fission? What happens when Uranium 235-92 is radioactive and decays in a series? How much energy does the fission of one Uranium 238 atom compare to the Uranium 235 or Plutonium 239?

Uranium-238 | chemical isotope | Britannica.com

create quantities of plutonium-239 from uranium-238, the principal constituent of naturally occurring uranium. Absorption of a neutron in the uranium-238 nucleus yields uranium-239, which decays after 23.47 minutes through electron emission into neptunium-239 and ultimately, after 2.356 days, into plutonium-239.

Plutonium-239 - Wikipedia

The fissioning of an atom of uranium-235 in the reactor of a nuclear power plant produces two to three neutrons, and these neutrons can be absorbed by uranium-238 to produce plutonium-239 and other isotopes. Plutonium-239 can also absorb neutrons and fission along with the uranium-235 in a reactor.
