The famous zeros of the Riemann zeta function and its generalizations (L-functions, Dedekind and Selberg zeta functions) are analyzed through several zeta functions built over those zeros.

What is the Riemann Zeta Function and what are its purpose ...

The Riemann Zeta function has some zeros that are easy to find which are of little interest but there are some other ones that are harder to find which is why they are called non-trivial. Saying that the real part of any non-trivial zero is 0.5 means that when you put complex number values into the function that the real part of that value is always 0.5 if the number you get out of the function
